8. Project Demonstration Phase

Live/demo presentation plan

Demonstration Goal

Show that EduGenie works end-to-end and that each major educational feature can be used from the frontend.

Recommended Demo Sequence

- 1. Introduce EduGenie and its learning problem.
- 2. Show the project architecture and GitHub repository.
- 3. Start the FastAPI application.
- 4. Demonstrate Q&A; with a simple educational question.
- 5. Demonstrate concept explanation.
- 6. Demonstrate summarization using a paragraph.
- 7. Demonstrate quiz generation.
- 8. Demonstrate learning recommendations.
- 9. Show the relevant source-code modules.
- 10. Show testing evidence and conclude with future enhancements.

Demo Talking Points

Explain that the frontend sends the selected task and input to FastAPI, the appropriate module processes it using the documented AI model, and the result is returned to the frontend.

Expected Demonstration Evidence

- Working UI.
- Working API/backend.
- At least one successful output for each feature.
- Repository containing the project files.
- Phase-wise PDFs accessible in the repository.

Conclusion

The demonstration should connect the original problem, implemented features, test evidence and final outcome into one clear story.
